

BLM GROUP strengthens its presence in Mexico and inaugurates new location

BLM GROUP has reinforced its presence in Mexico, inaugurating its new office in Mexico City, located in the municipality of Cuautitlan Izcalli. BLM GROUP has been present in the Central American state since 1992, supporting customers with the most appropriate technological solution for their needs and accompanying them in their growing path.

The big Mexican-style celebration was enriched by the participation of Emanuela Colombo, CEO of the Group, who emphasized how commitment and attention to new customer needs have always been the common denominator that distinguishes the work of the entire Group in every part of the World together with the values shared by the company.

The new office, covering 1,200 square meters and staffed by 39 employees, is equipped with a large exhibition area, which houses a good sampling of BLM GROUP's product portfolio - from Lasertube to sheet metal cutting machines, from tube benders to tube end-forming and wire benders - to meet varying production needs.

"We are very happy to inaugurate our new Mexican headquarters," said Alejandro Gómez, General Manager of BLM GROUP México, at the ribbon-cutting ceremony. "In Cuautitlan Izcalli we group the offices and the showroom area in one location, so that from the very beginning we can offer complete advice on the product and the various solutions we can propose. In our showroom, customers can see many types of machinery at work and evaluate the quality of the different processes. BLM GROUP is a well-known and well-established brand in Mexico, leveraging the expertise of our employees in both sales and service. We have a number of loyal customers with some partnerships being rooted in the distant past: we are proud to have grown together and to continue along a technological path that is increasingly attentive to the changing needs of the market," he concluded. BLM GROUP's systems installed in Mexico far exceed 500 units, and the company is present throughout Mexico with sales consultants and highly specialized support service.
